A medicine container for use in the steam device to make a health therapy, the frame body thereof is provided with a water reservoir cup and a hollow housing, a cone portion extends in the bottom of the housing to connect with the water reservoir cup, the medicine container is covered by a movable cap and then is nested into the cone portion of the hollow housing, the bottom of the medicine container is airproofly engaged on the inner brim of the cone portion. Thus the steam can be collected into the cone portion so as to completely enter into the medicine container to contact the medicament. The medicine steam volatilizing from the medicine container flows out of a branch tube of the upper part of the hollow housing and will not mix with the steam containing no medicament so that the output of the medicine steam becomes better.
